## PROFESSIONAL SUMMARY

**Full-Stack Software Engineer** with expertise in **backend systems**, **cloud infrastructure**, and **production fintech applications**. Delivered features for **10,000+ employees at Turkey's largest bank (C#/.NET Core, Angular)** and built **Nummoria—a cross-platform AI-powered finance SaaS** serving active users on **Web and iOS (Node.js, React, MongoDB)**. Proficient in **RESTful APIs**, **microservices**, **AWS/cloud deployment (Vercel, Railway)**, and **OAuth 2.0 authentication**. Strong foundation in **algorithms**, **data structures**, and **system design**.

## EXPERIENCE

**Full-Stack Software Engineering Intern** *Apr 2025 – Jul 2025*

**Halkbank — One of Turkey's Largest State-Owned Banks** Istanbul, Turkey

- Contributed to **Personnel Absence System** serving **10,000+ employees**, implementing attendance-tracking logic in **C#/.NET Core** across **75+ relational tables** (holidays, medical leave, approval workflows).
- Built **Angular + ASP.NET Core** components for **real-time reporting**, deployed to **800+ branches nationwide**. • Built a full-stack **Angular + ASP.NET Core** solution enabling real-time reporting and high-volume data processing for **800+ branch-level operations** across Turkey.
- Delivered features end-to-end within an enterprise **Agile/Scrum** environment, participating in sprint planning, code reviews, and production deployments.

**Software Engineering Intern** *Aug 2023 – Oct 2023*

**ComPro - IBM Platinum Partner** Istanbul, Turkey

- Contributed to enterprise **cloud migration** projects at Turkey's leading **IBM Platinum Partner**, gaining **production-level** experience with **Docker containerization**, **CI/CD pipelines**, and **Linux system administration**.
- Built proof-of-concept **Docker environments** for **legacy backend modernization**, enabling **faster iteration cycles** for internal dev teams and client demos.
- Conducted technical evaluation of **IBM Cloud vs. AWS for containerized workloads**, analyzing **cost/performance trade-offs across compute (EC2 vs. Virtual Servers)**, **storage (S3 vs. Object Storage)**, and orchestration platforms to inform **client migration strategies**.

## PROJECTS

**Nummoria — AI-Powered Personal Finance SaaS** *Oct 2025 – Present*

Full-Stack Engineer & Product Owner • nummoria.com • iOS App: TestFlight Release

- Architected a cross-platform fintech application (Web + iOS) using **Node.js, React, React Native, and MongoDB**, supporting real-time financial tracking across **multi-account and multi-currency** workflows.
- Engineered a scalable **Node.js backend** with modular **RESTful APIs** and optimized **MongoDB schemas** modeling complex financial entities: transactions, categories, accounts, and investment portfolios.
- Built an **AI-powered financial insights engine (OpenAI GPT-4 API & Gemini 3.1-API)** analyzing user spending behavior and generating contextual recommendations, driving measurable improvement in financial decision-making engagement.
- Reduced manual transaction entry by **~70%** by designing and implementing an **OCR-based data ingestion pipeline** for automated receipt and bank-statement parsing.
- Designed backend infrastructure to support **1,000+ concurrent users**, leveraging **connection pooling, query**

**optimization**, and horizontally scalable service architecture.

- Implemented secure authentication flows including **Google Sign-In** and **Apple Sign-In** and **JWT-based session management**, adhering to **OAuth 2.0** standards and App Store security requirements.
- Owned the full product lifecycle—system design, development, **CI/CD**, and production deployment—for a **subscription-based SaaS platform** targeting App Store public release.

## **Eyehub — TUBITAK Government Research Project 122E085** *Nov 2023 – Jun 2024*

**Backend Engineer** Istanbul, Turkey

- Served as **backend engineer** for a government-funded dyslexia-detection mobile application supporting academic and clinical research workflows.
- Designed and deployed scalable backend infrastructure on **AWS (EC2, Lambda)**, ensuring high availability and reliability for concurrent research data ingestion.
- Modeled complex medical datasets in **MongoDB (NoSQL)**, enforcing strict **data integrity** standards required for academic analytical processing and IRB compliance.
- Built secure, high-performance **RESTful APIs in Node.js** powering mobile client synchronization, user authentication, and real-time data submission.
- Collaborated directly with university researchers to translate clinical requirements into **production-grade backend systems**, delivering on tight academic milestones.

## **TECHNICAL SKILLS**

**Languages:** JavaScript (ES6+), TypeScript, C#, Java, Python, SQL

**Full-Stack Development:** Node.js, React.js, React Native, Angular, ASP.NET Core (.NET), REST APIs, Microservices, OAuth 2.0, JWT

**Databases & Storage:** MongoDB, SQL Server, MySQL (schema design, query optimization, indexing, data modeling)

**Cloud & Infrastructure:** AWS (EC2, Lambda, S3), Docker, CI/CD, Linux, Bash

**Architecture & Design:** System Design, Microservices Patterns, REST API Design, Data Modeling, Scalability, Caching Strategies

**Testing & Tools:** Jest, Moq, Postman (API testing), Git (branching, rebasing), Swagger/OpenAPI, Unit/Integration Testing, TDD

## **EDUCATION**

**B.Sc. Computer Engineering** *Oct 2021 – Aug 2025*

**Bahcesehir University** Istanbul, Turkey

## **LANGUAGES**

**Turkish** (Native) • **English** (Full Professional Proficiency) • **German** (B2 — Certification Prep)
